
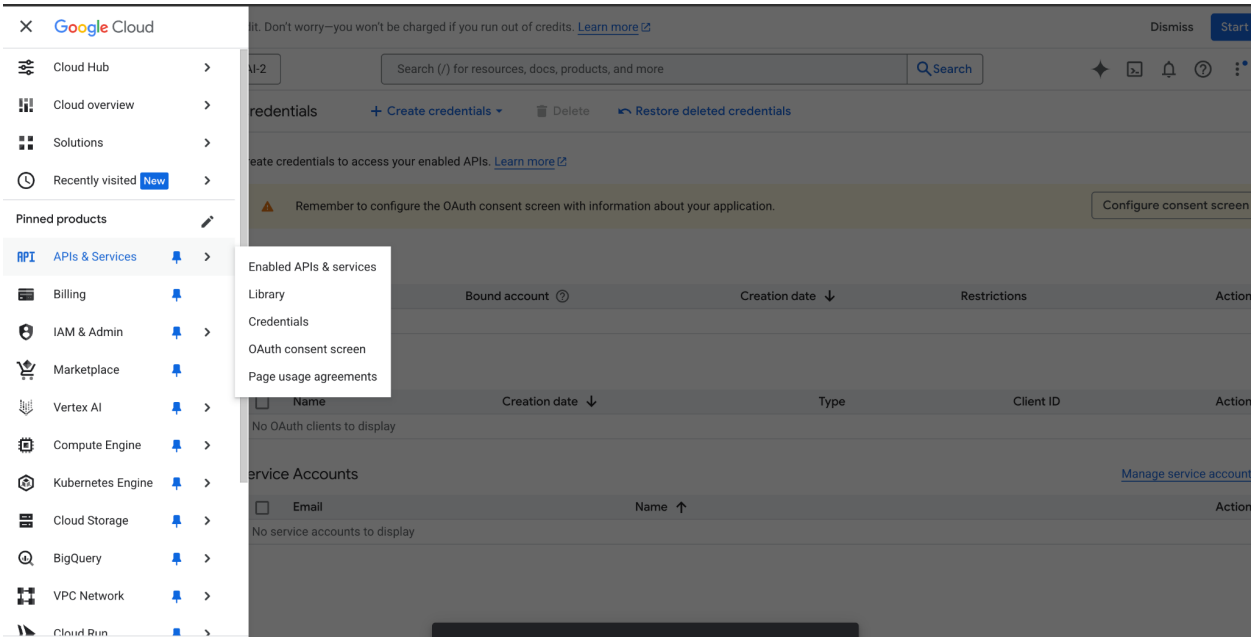
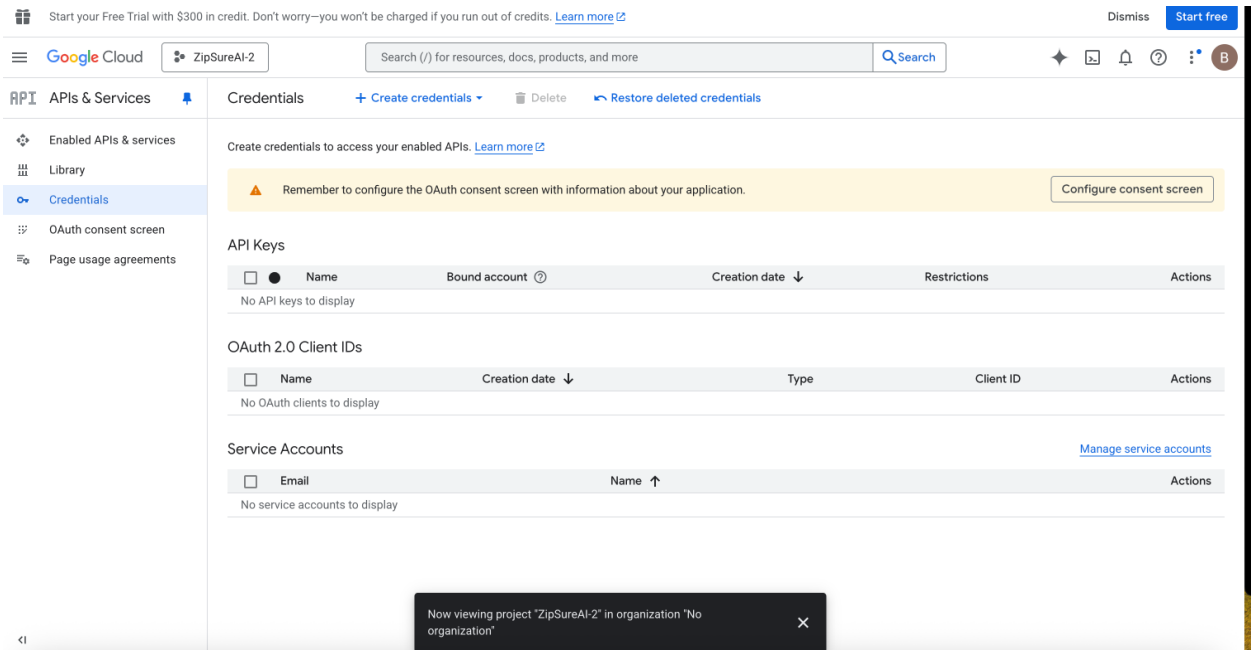
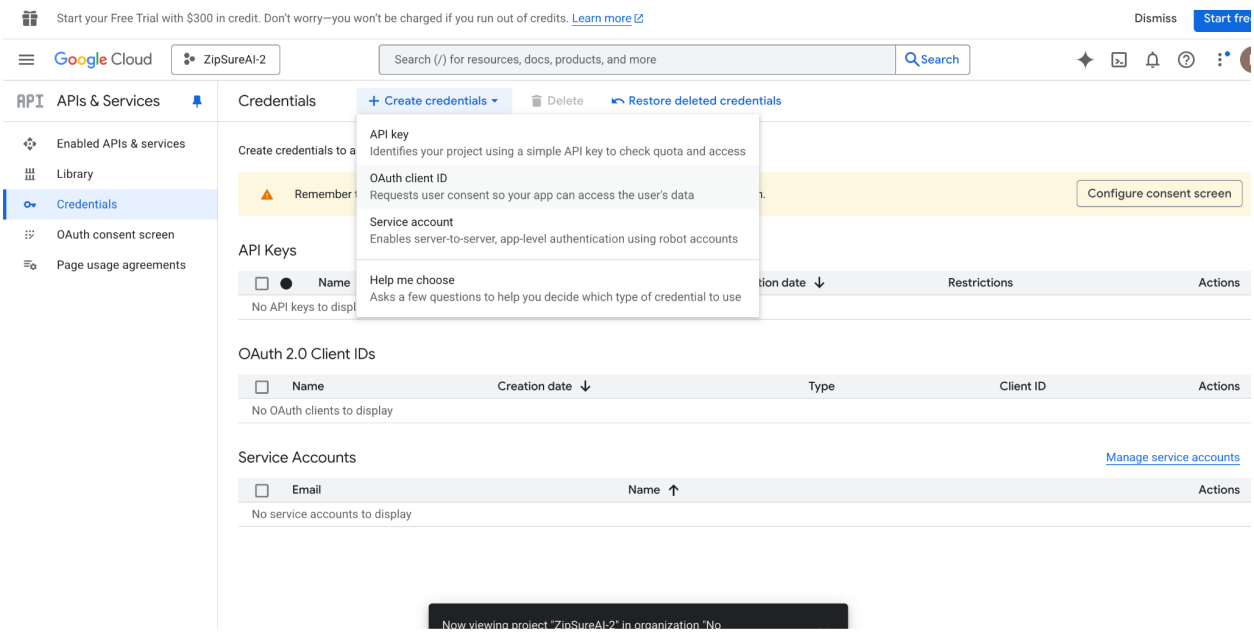
After creating the project, select the project on the screen. Then select menu on the left -> API's and Services



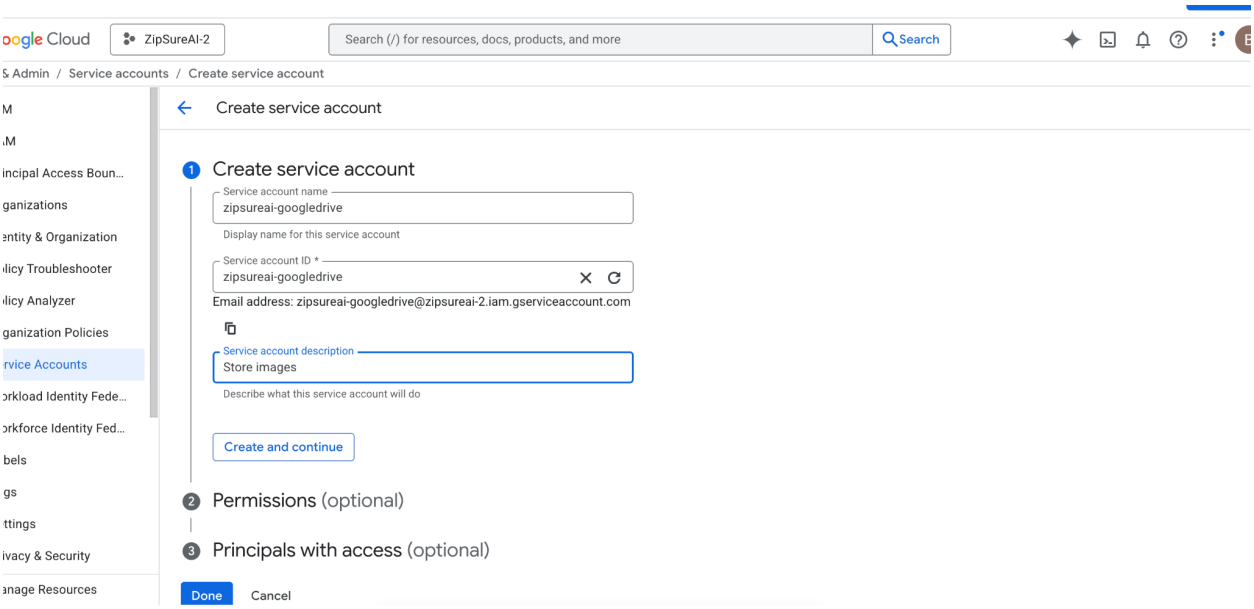
Then select Credentials

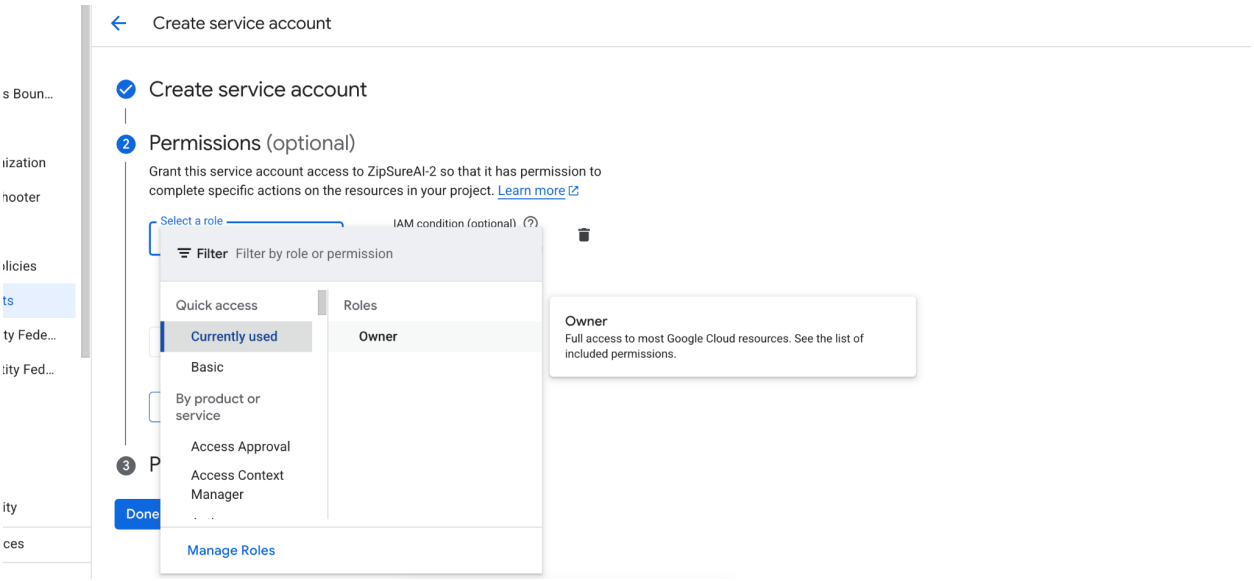


Click Create credentials

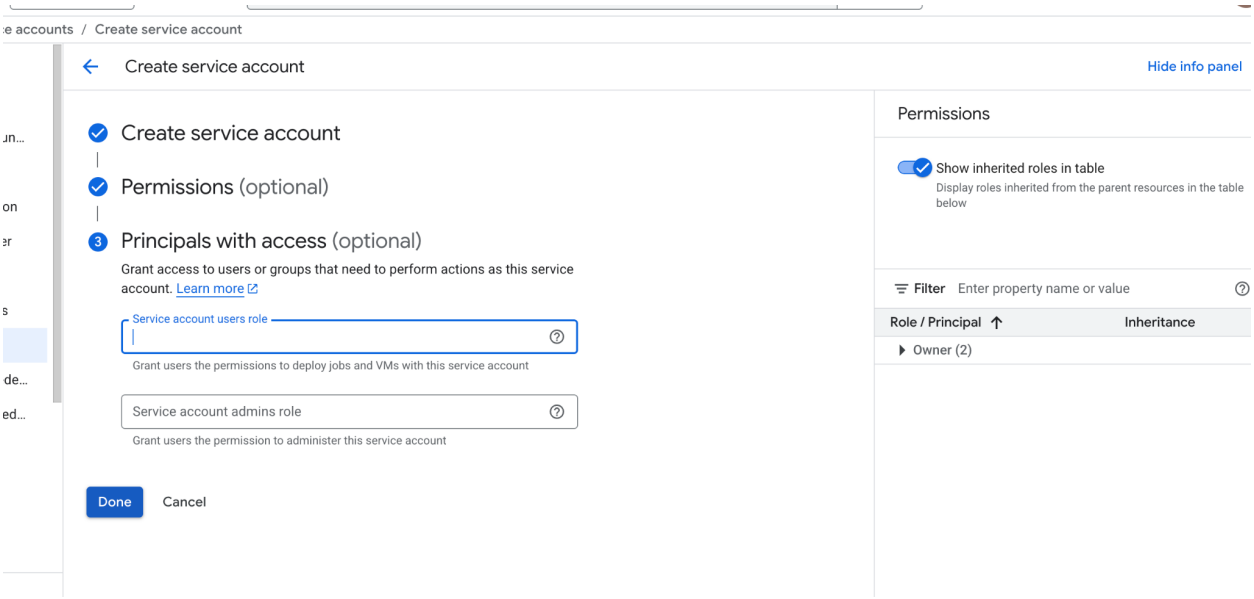


Then select Service Account

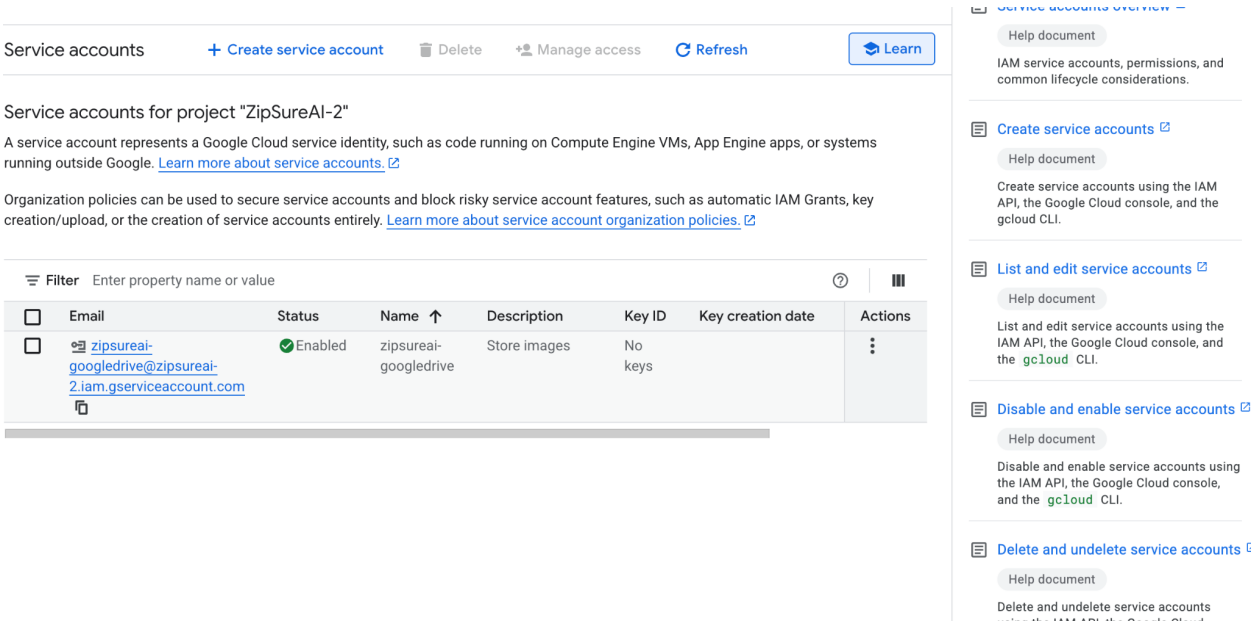




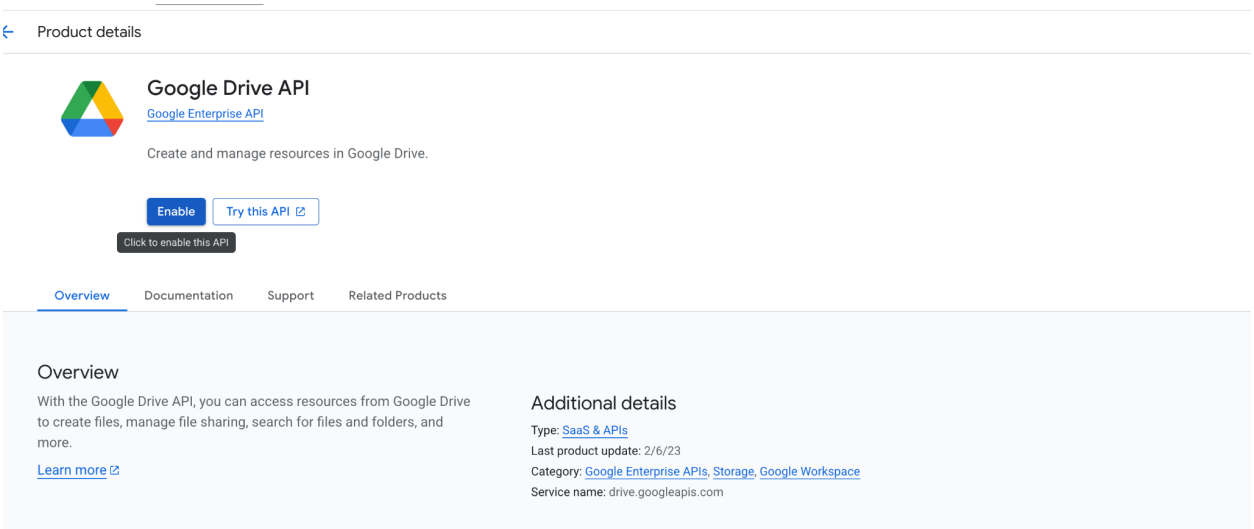
Select Owner permission



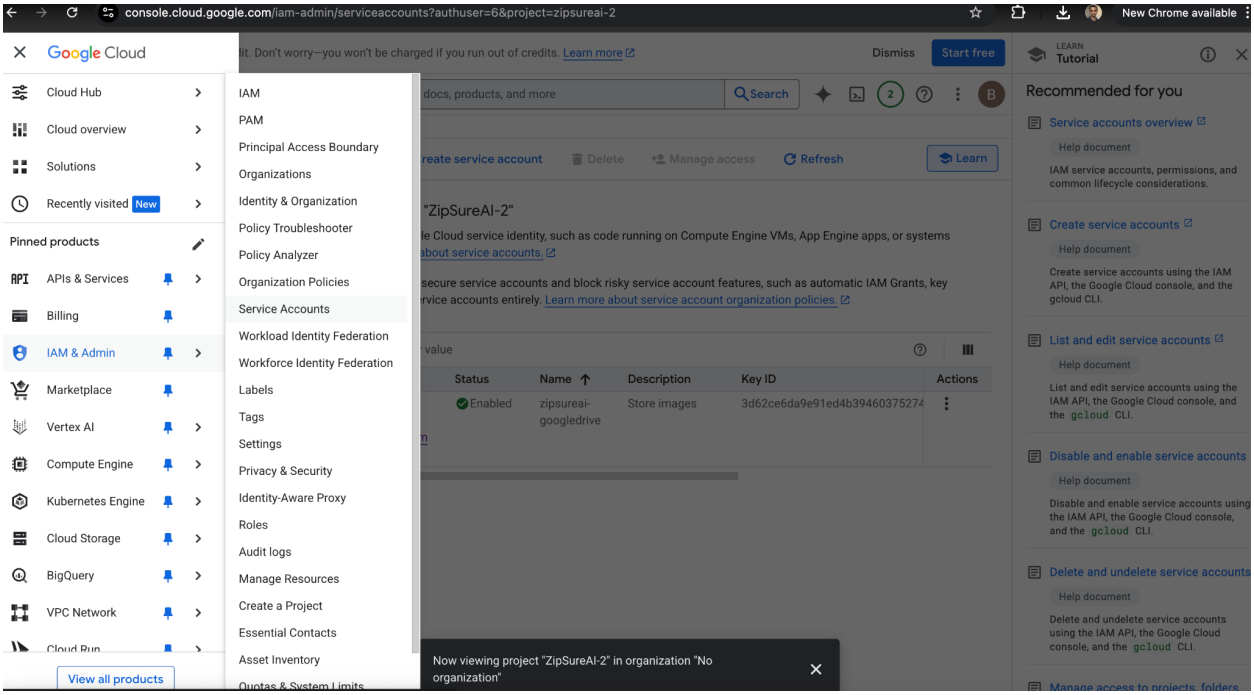
Select done



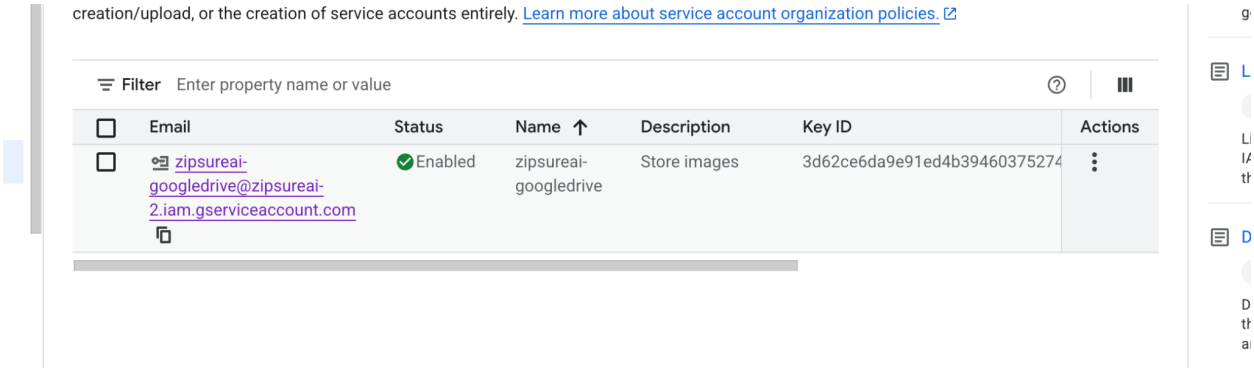
Then go to API and services -> Library -> google drive API



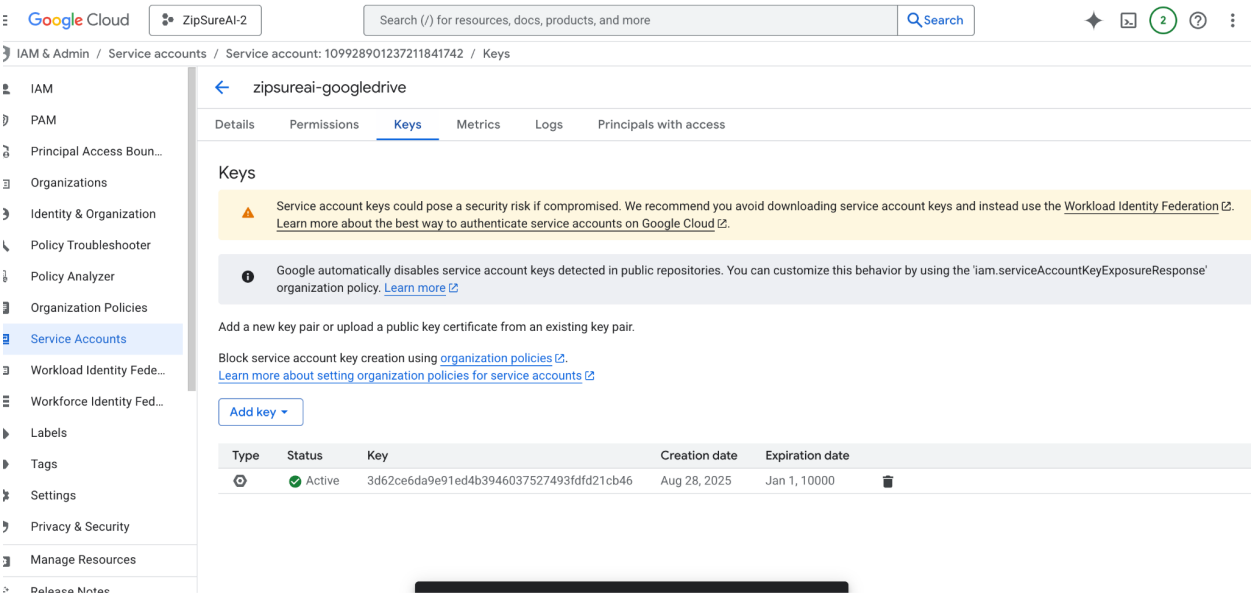
Then click on Menu -> IAM -> Service Accounts

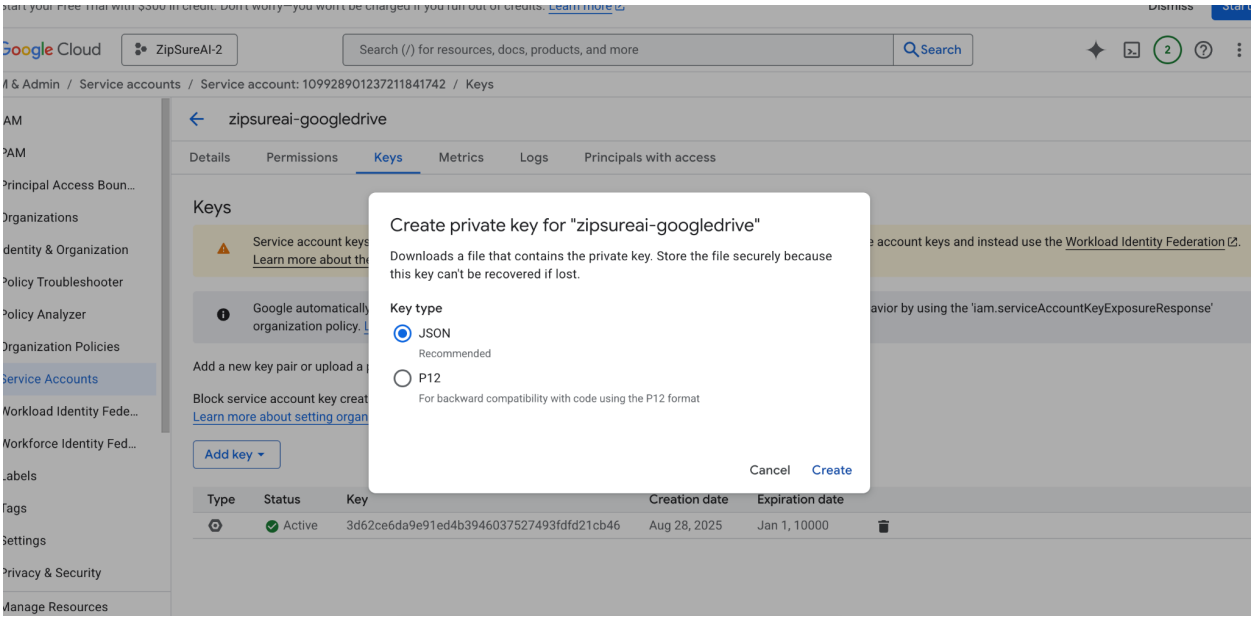


Then click on this email string



Then click on keys -> Add Key -> Download JSON





Then After downloading the json, rename the json to service-account.json..Go to the directory in the command prompt where the json is there. Then based on the type of OS you have on your laptop, run one of the following

2. **Convert JSON → Base64**

   On **Linux / macOS**:

   ```bash
   cat service-account.json | base64 -w 0
   ```

   On **Windows PowerShell**:

   ```powershell
   [Convert]::ToBase64String((Get-Content service-account.json -Raw).ToCharArray() -as [
   ```

   Or simpler (Windows CMD):

   ```c
   certutil -encode service-account.json service-account.b64
   ```

Then on the command line, you get a long Base64 string..Copy that and paste it in the env file under **`GOOGLE_SERVICE_ACCOUNT_B64`**

It will loook similar to
